eStream®

Impact on Education Survey

We asked our user group a number of key questions around how Planet eStream had saved them time, money and improved outcomes within their organisation. The following slides provide the results of the survey.

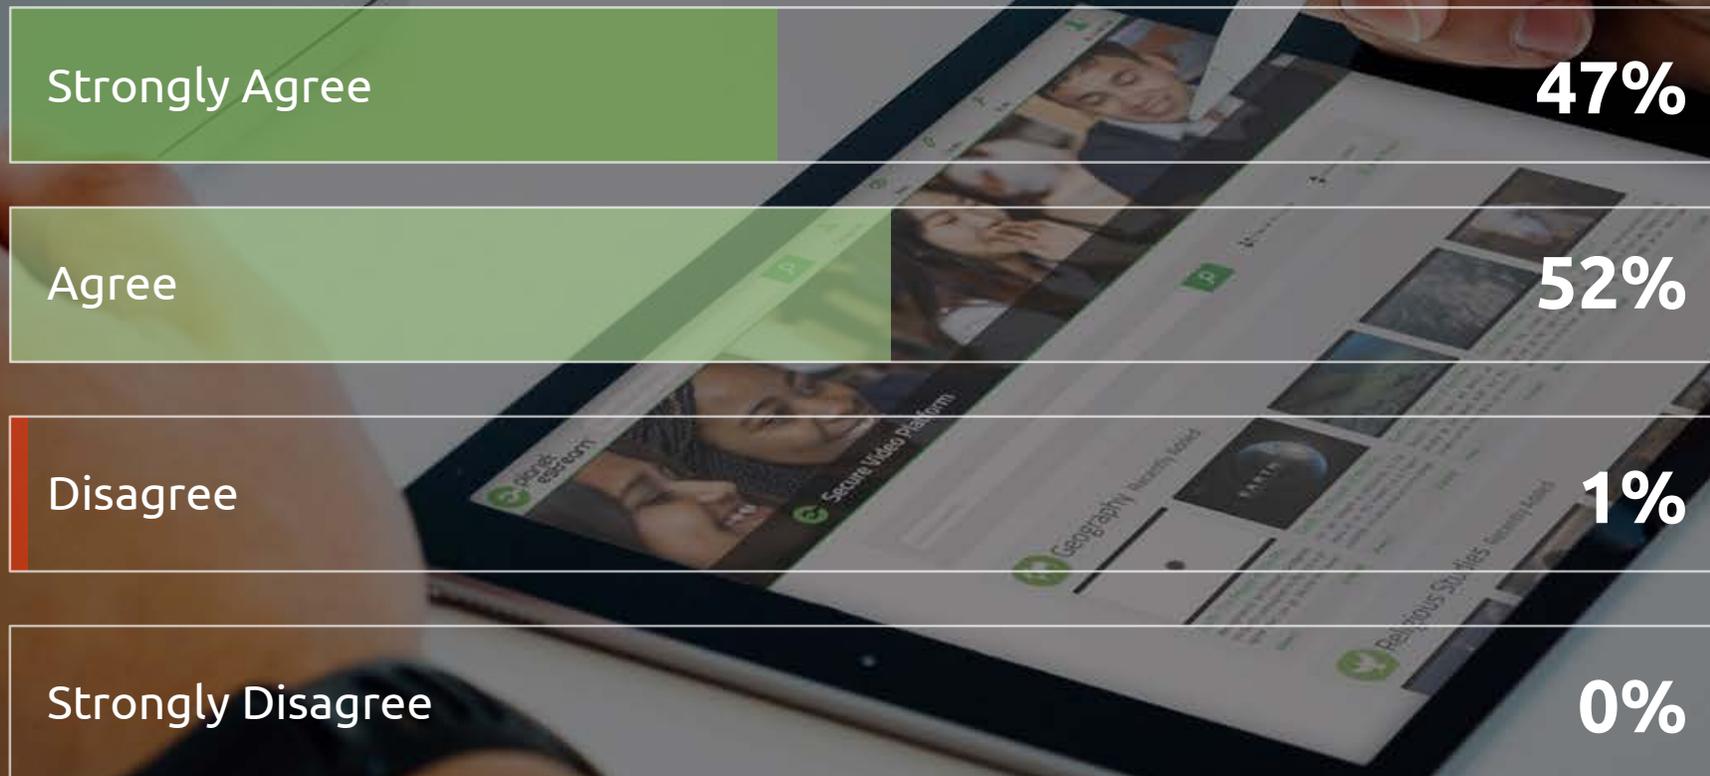

Video plays an important role in your personal teaching and learning or that of your organisation...

In your opinion, has Planet eStream supported your use of video in teaching and learning at your organisation?

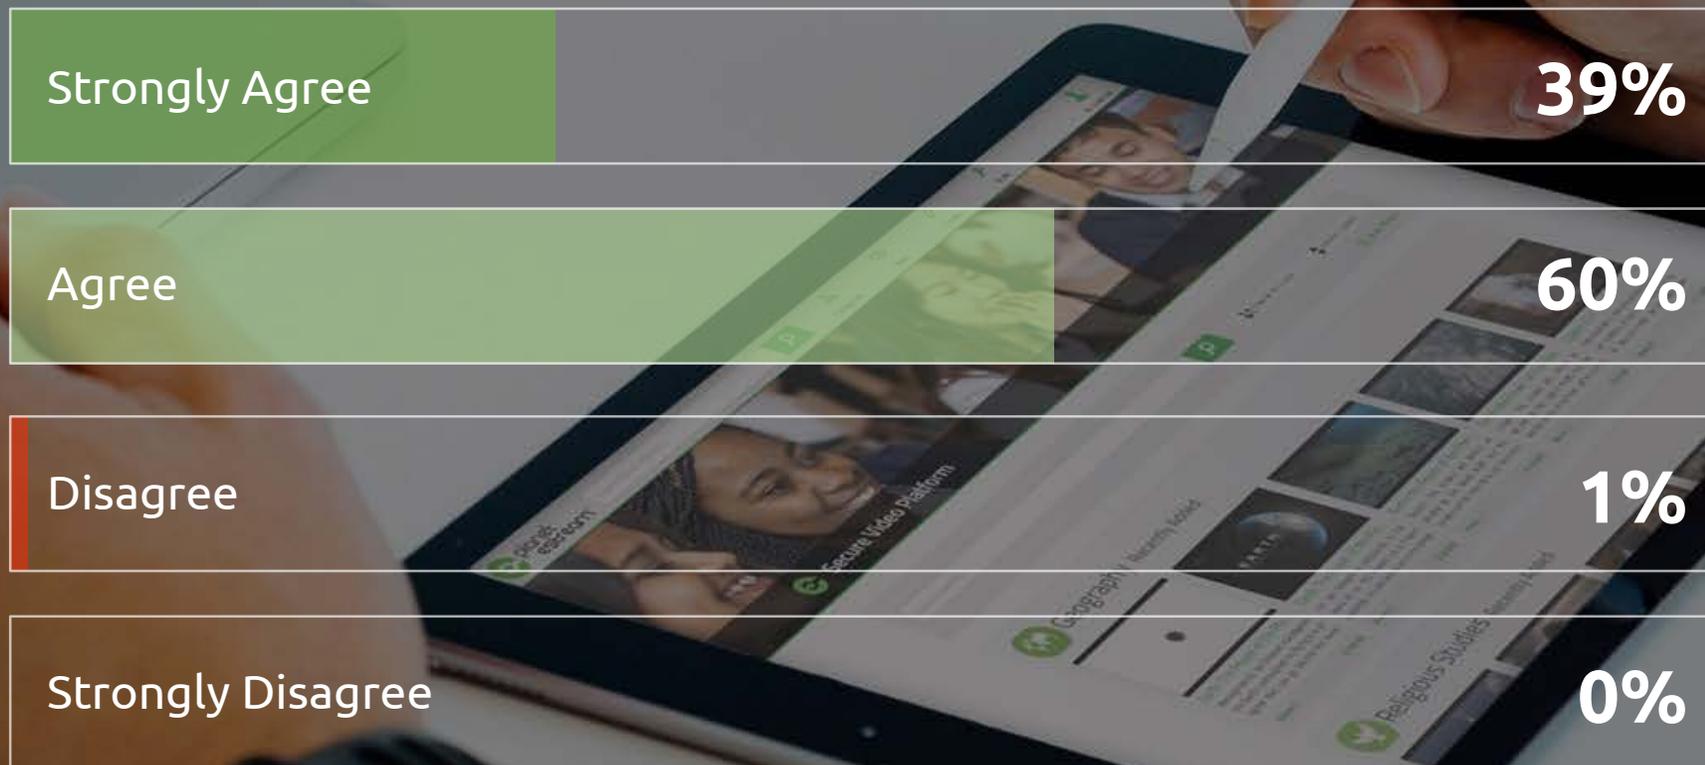

The feedback that we consistently receive from our user group is that Planet eStream is a time-saving resource for educators, e-learning specialists, learning resources teams and IT professionals. In your experience and scope of use do you...

Planet eStream offers a fast learning curve in applying the use of video content in the classroom.

Our users have said that the ability to share content quickly with students and colleagues has improved their workflow. What is your opinion on this?

Having all of your content in one central platform makes finding curriculum relevant resources faster.

Live streaming of events using Planet eStream is simple to set up and easy to use.

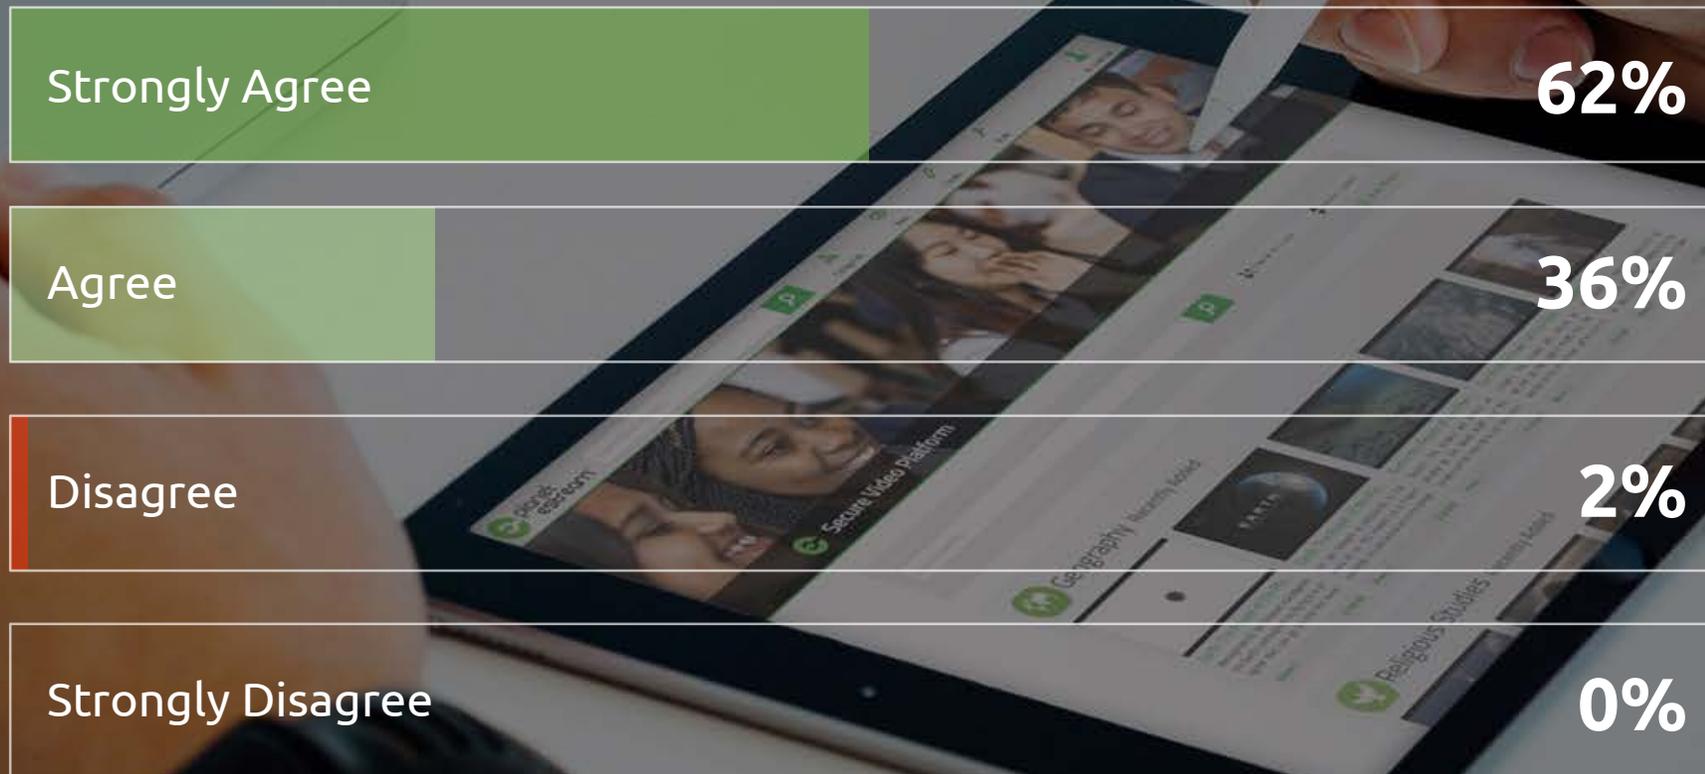

The Planet eStream integration with your virtual learning environment means that you can easily enhance your course pages with digital content embedded from Planet eStream.

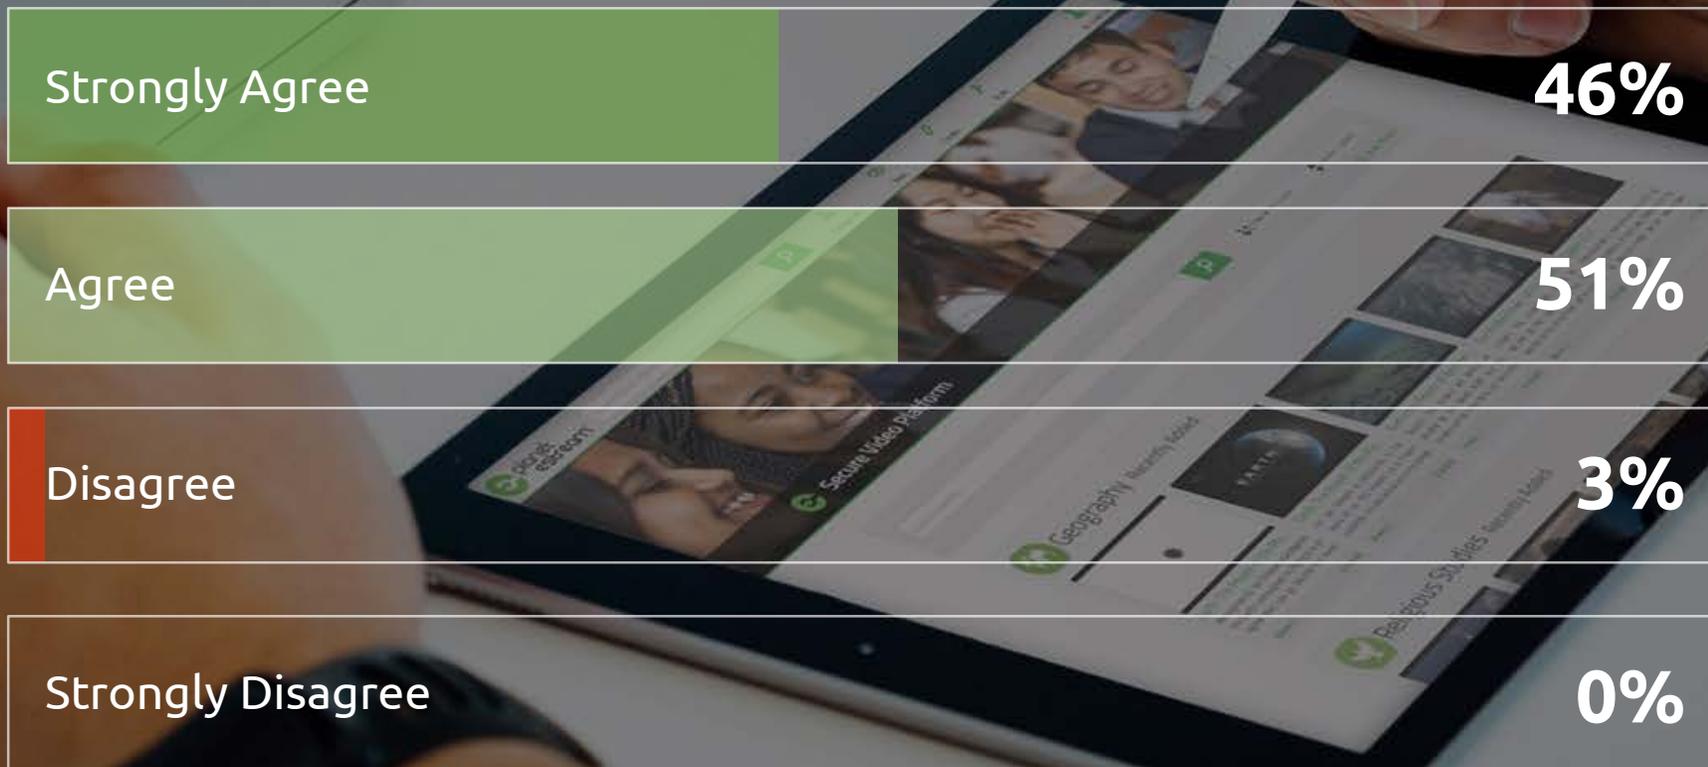

The ability to quickly communicate key messages via Planet eStream digital signage has improved engagement within your organisation.

Access to the 1.7 million TV and radio resources available via the Planet eStream Connect service provides a superfast way of finding curriculum relevant resources.

Planet eStream's automated approach to TV and radio recording saves everyone time, empowering educators and learning resources staff to find and record content that they need quickly and easily.

99% of those surveyed agreed that Planet eStream saved them time!

When teachers wanted to post videos they made for their classes it was a huge, time-consuming process. With Planet eStream the process is so simple and fast!

Greeneville City Schools

Planet eStream is so easy and intuitive to use, even academics who are challenged with other educational systems can use this system seamlessly, and thus reducing the support calls to the IT Service Desk.

Latymer Upper School

Planet eStream has allowed staff to quickly and easy upload content then embed in our blackboard environment. This has dramatically cut down ICT's workload and allowed staff to feel confident publishing media content.

University of Worcester

Sharing photos from our large events has been incredibly easy. We've been able to share photos within 24 hours instead of several weeks before.

Trinity School Nottingham

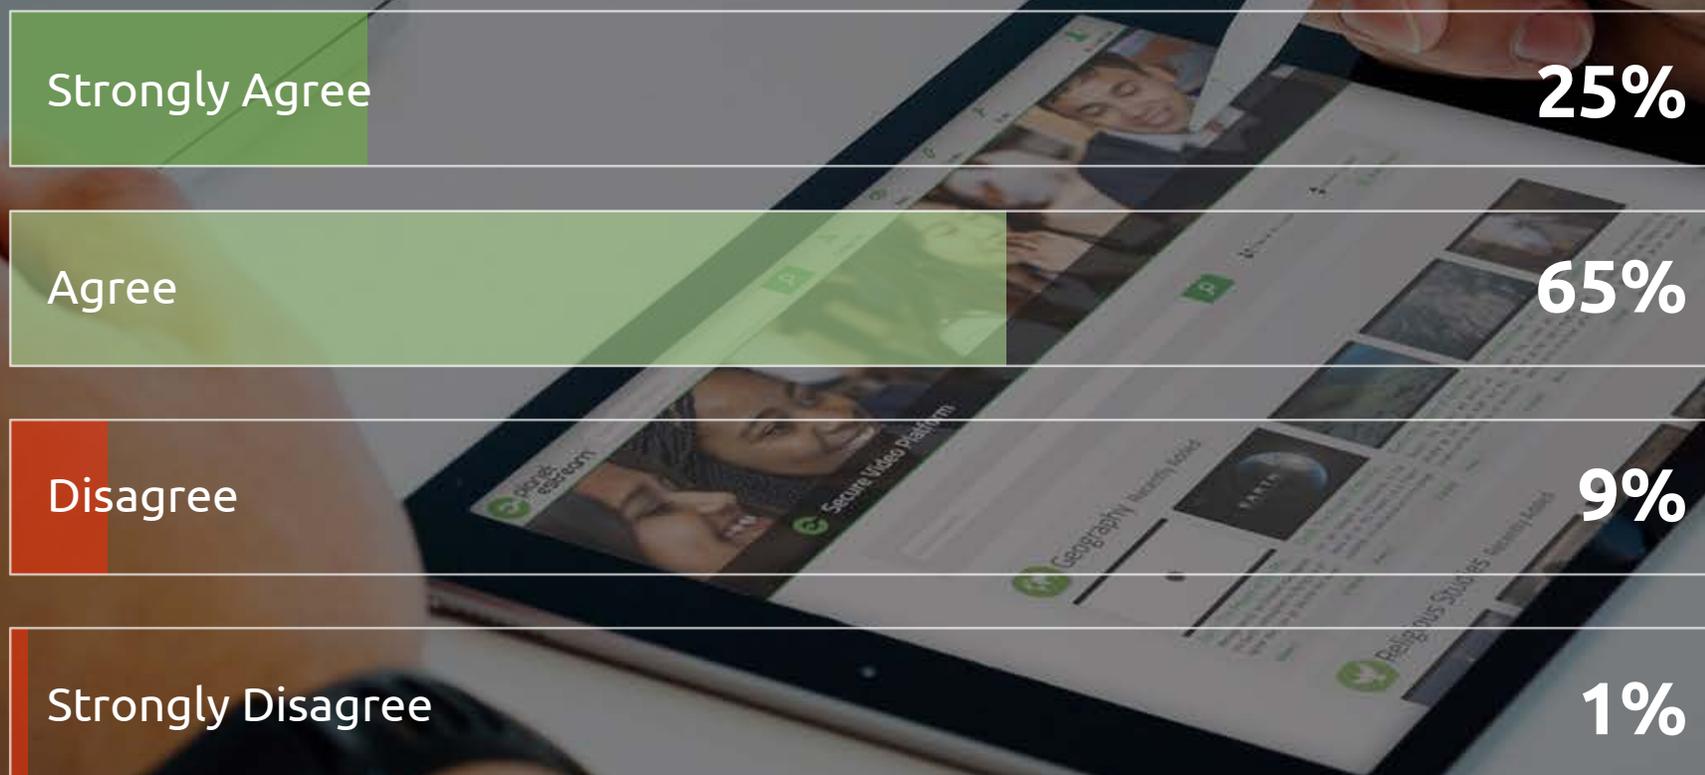

The ability for our students to carry out video assessments and our staff to give video/audio feedback through the Planet eStream Moodle Plugins has cut time for all parties, including external verifiers.

Exeter College

Teachers can record and access TV programmes independently, without having to wait for the completion of a centralised procedure.

Millfield School

Since implementing Planet eStream your organisation has experienced an improvement in learning outcomes for both students and educators.

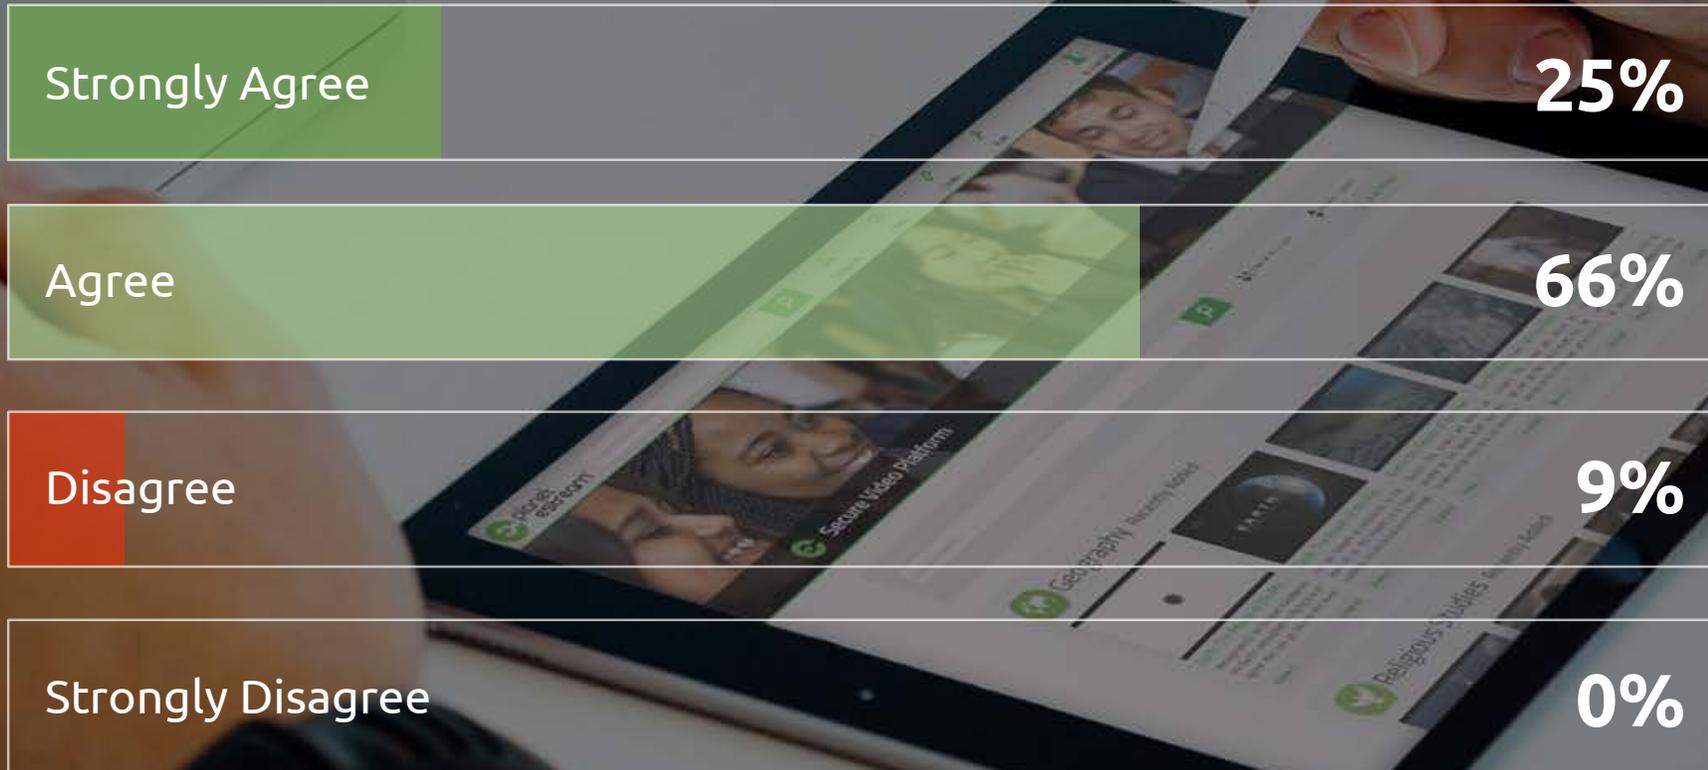

Planet eStream is supporting educators in their application of digital technologies in the classroom.

Planet eStream is supporting educators in creating their own digital learning resources.

Planet eStream is supporting educators in becoming video based learning practitioners.

Planet eStream is a strong enabler for students and, when blended with traditional teaching methods, provides a strong student engagement tool.

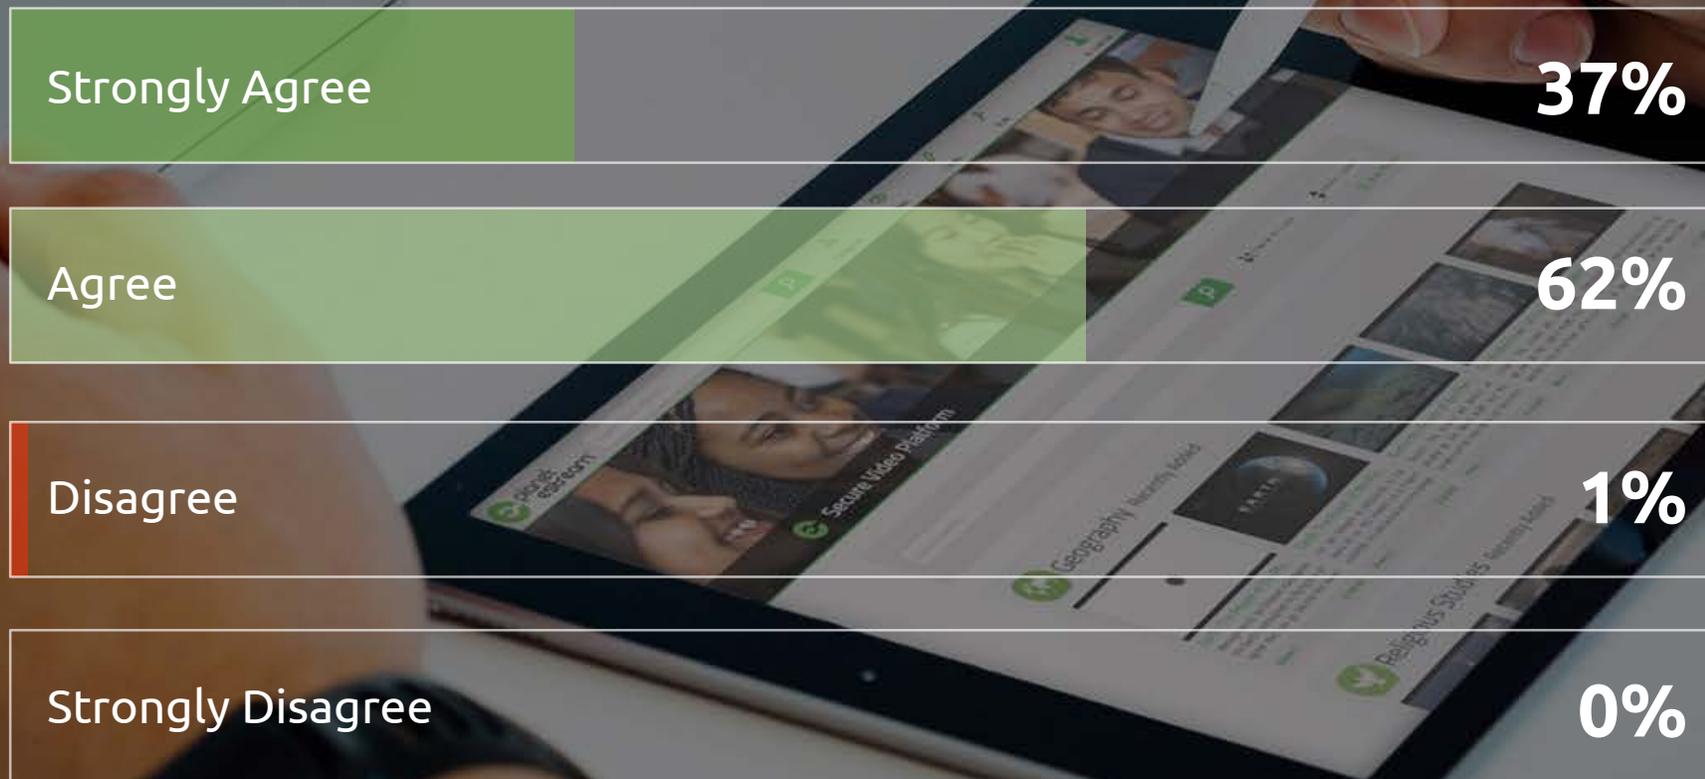

Access to validated, high quality digital learning resources, from any device, increases student engagement.

Student engagement and learning outcomes are improved when video based learning is a more interactive experience with quizzes, drawings, annotation and links to other learning resources.

Increased engagement with students improves behaviour in the classroom.

Showcasing student work and celebrating success stories via Planet eStream digital signage is likely to create a positive attitude to learning amongst your students.

Planet eStream offers comprehensive analytics to assist in progressing and monitoring student performance. The feedback we have received is that this has a direct correlation with improved results. Do you...

Providing students with access to a secure video learning platform, on-demand, is likely to improve learning outcomes.

90% of those surveyed agreed that Planet eStream had delivered improved outcomes!

We used video from Planet eStream Connect in our Business class - assignments produced as a result had much higher marks than previous assignments which didn't use video content.

Ashton Sixth Form College

We have been working with two students for over a year to deliver instructional videos aimed at their peers, showing them how to eat on a budget. The students who we are working in partnership with are Nutrition students and they are using the Planet eStream interactive video elements to overlay nutritional information and to quiz viewers on the benefits of certain ingredients or the dishes that they are making. This has made what could be another generic cooking tutorial into something more informative, educational and engaging for new students and returning students alike. This concept has been presented at an external conference and a collaborative partnership has developed to include the resources in a new app to be developed.

St Mary's University Twickenham

Our Drama department has been extremely active in using Planet eStream, students have been able to record short drama training sessions of each other, and they have uploaded them on Planet eStream. Because it is so easy to circulate the link, the whole class has been able to give feedback on the video performances under the teacher's supervision. It also has the advantage of creating a mini-database just for Drama that can be used in the future to provide useful examples.

King's College School Wimbledon

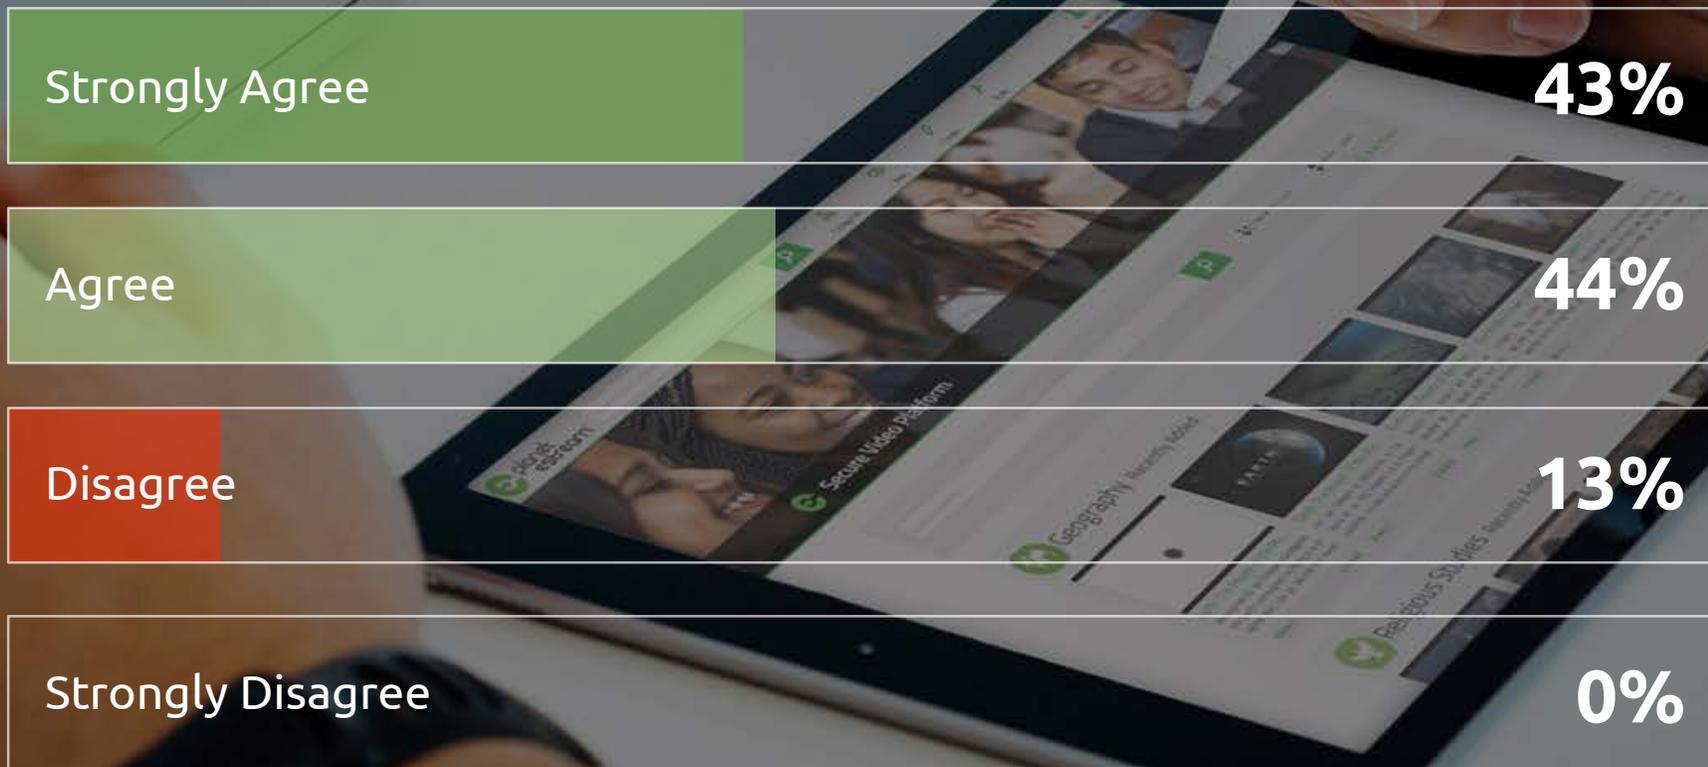

Floristry demonstrations which have been recorded and added to our Planet eStream platform have enabled learners to re-visit techniques, and with the use of the quiz editor, we have been able to prompt learners at key parts of the process, ensuring when practical and assignment work is undertaken, the outcomes are of a professional standard.

Reaseheath College

Students who are asked to do a presentation in class often have this recorded and uploaded to Planet eStream for them to watch and reflect on afterwards; this allows students to build on their presentation skills and reflect on their performance.

City College Norwich

Planet eStream has saved your organisation money on content in real terms, by providing access to high quality TV and radio resources you would otherwise have needed to purchase separately out of departmental or library/learning resources budgets.

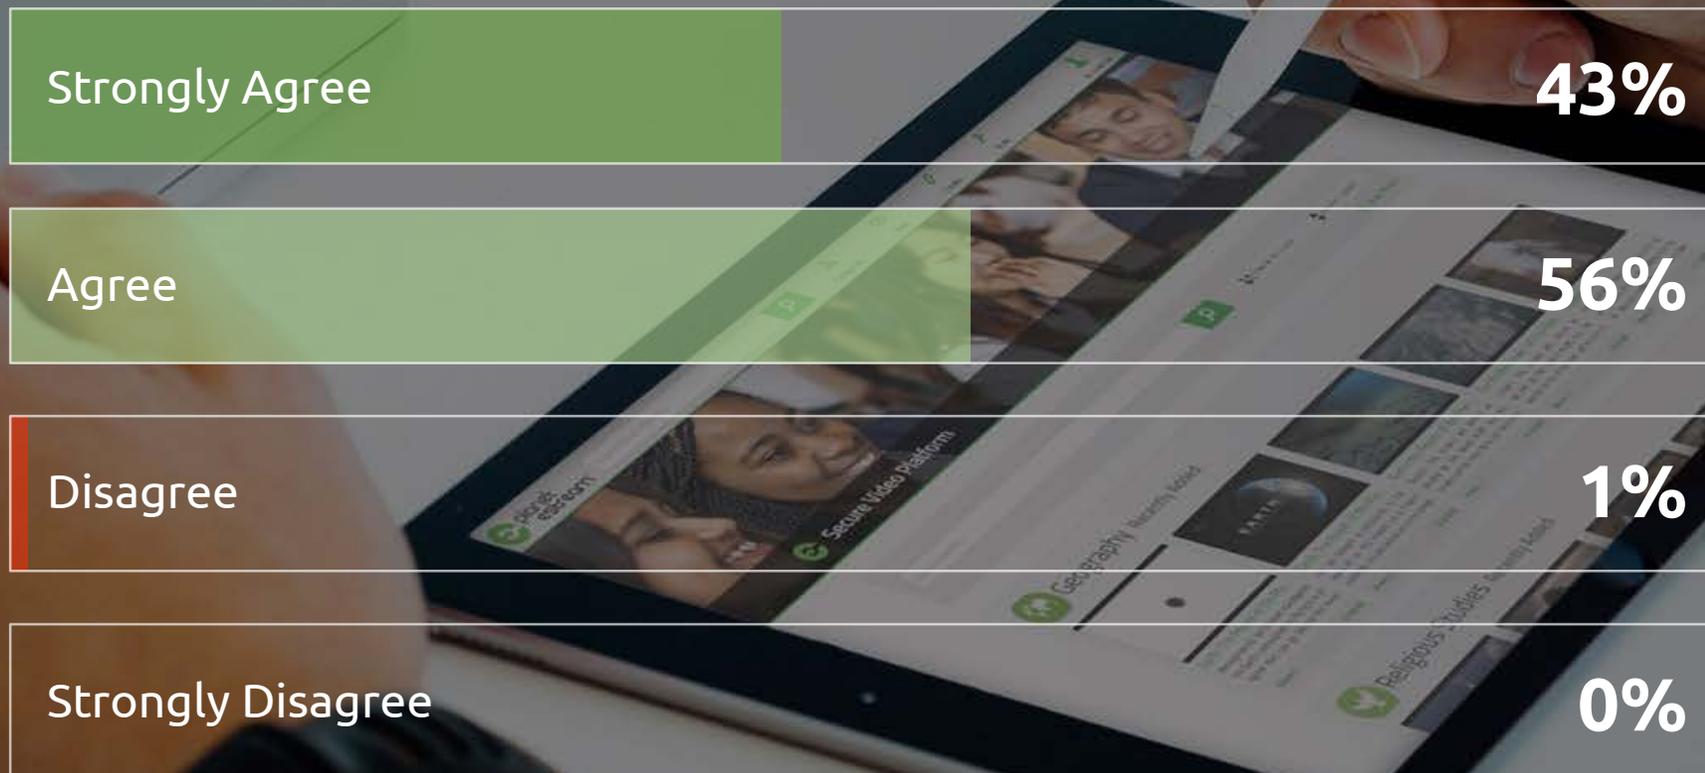

Planet eStream has added value to your organisation by saving valuable time for staff across multiple departments.

Planet eStream offers a unified video platform approach, negating the need for multiple subscription costs to third party products and therefore saves you money.

In your opinion, does Planet eStream represent good value for money?

98% of those surveyed agreed that Planet eStream represented good value for money!

We replaced ClickView and instantly saved money. This money was invested in screens for digital signage which has reduced overall printing costs.

Blackburn College

Prior to using eStream we had subscriptions for BoB, Samsung Magic Info and MediaCore. These three platforms were costly and having one solution that meets all these needs at a reduced cost has saved us money but also the time it takes to administer and maintain numerous systems and supporting them which is just as valuable as saving money.

St Mary's University Twickenham

The wealth of content provided by the BBC alone via the Planet eStream Connect service outshines our library resources when it comes to video, and is a catalogue that is constantly updating, unlike DVDs. We have also saved money in the long run because the Planet eStream system has negated the need for multiple licences for TV recording, signage, lesson capture and 3rd party quiz plug-ins for our LMS.

Reaseheath College

Our previous digital signage system was the same cost as the eStream, but only covered 4 displays and no streaming functions. We use the signage system across multiple rooms for open evenings/days and can increase or decrease displays as we need. Streaming Videos into the VLE has improved access to the content, whereas before we would have had DVDs on a shelf, taking up space in the LRC. The whole system is excellent and we love it! We are very excited to have recently got the Connect licence as well.

Sir John Deane's College

The provision of Planet eStream Connect has significantly widened the availability of content from the BBC through the BBC Digital Archive, and from other sources through the Connect Beacon community. This has allowed us to provide rich content to a large number of students from a single source, rather than purchasing multiple copies of media to provide sufficient coverage e.g. a single recording of the film 'Of mice and men' is now available to ALL GCSE English students, at a time and place that suits them!
